

In order to make Ireland's National Renewable Energy Targets we need to build 3000MW by 2020, that is in addition to the 1635MW already built, operated and maintained.....

1. This equates to over 350MW per year

2. 350MW per year = €700m per year in investment

3. 350MW per year = 525 jobs per year

4. 70% jobs in construction 30% in services in consultancy

5. This equates to 367.5 jobs in construction per year and 157.5 in services/consultancy

Increase in construction activity = Need for Health & Safety!
